WONMUNNA IRON PROJECT - UPDATE

Highlights

- ***Final NMM resource drilling assay results received,***
- ***Commencement of JORC resource calculations for NMM prospect,***
- ***Commencement of NMM wide-diameter diamond drilling to obtain samples for ore characterisation,***
- ***CMM prospect drilling continues to produce thick intercepts of iron mineralisation to 24m @ 62.12%Fe,***
- ***Continuation of SMM and CMM drill evaluation.***

NMM RESOURCE DRILLING

Assay results have been received for the final 3 reverse circulation drillholes completed as part of the program of gridded resource drilling at the NMM (North Marra Mamba) prospect, Wonmunna Project, East Pilbara Region, Western Australia. Significant (>50% Fe) drill intercepts are listed in Table 1 and drillhole locations are shown on Figure 1.

All of the NMM drilling data is in the process of being compiled and reconciled for use in the JORC-compliant ore resource calculations. This work remains on schedule for announcement of a maiden iron ore resource in late August, 2008.

Six wide-spaced PQ diamond drillholes are being completed at NMM to obtain representative samples for ore characterisation tests. This work will include density measurements (For use in the resource calculations) and tests of the basic metallurgical characteristics of the ore to use as a basis for future work.

Table 1: Significant (>50% Fe) NMM Resource Drill Intercepts WNC448, 565-567

Hole	East	North	From(m)	To(m)	Width(m)	Fe %	SiO ₂ %	Al ₂ O ₃ %	P %	S %	LOI %
WNC448	710900	7441610	12	44	32	58.02	5.00	2.28	0.09	0.01	9.1
			<i>(including</i>

			48	52	4	53.27	8.47	3.95	0.12	0.02	10.2
WNC567	709096	7441848	<i>no significant results (<50% Fe)</i>								

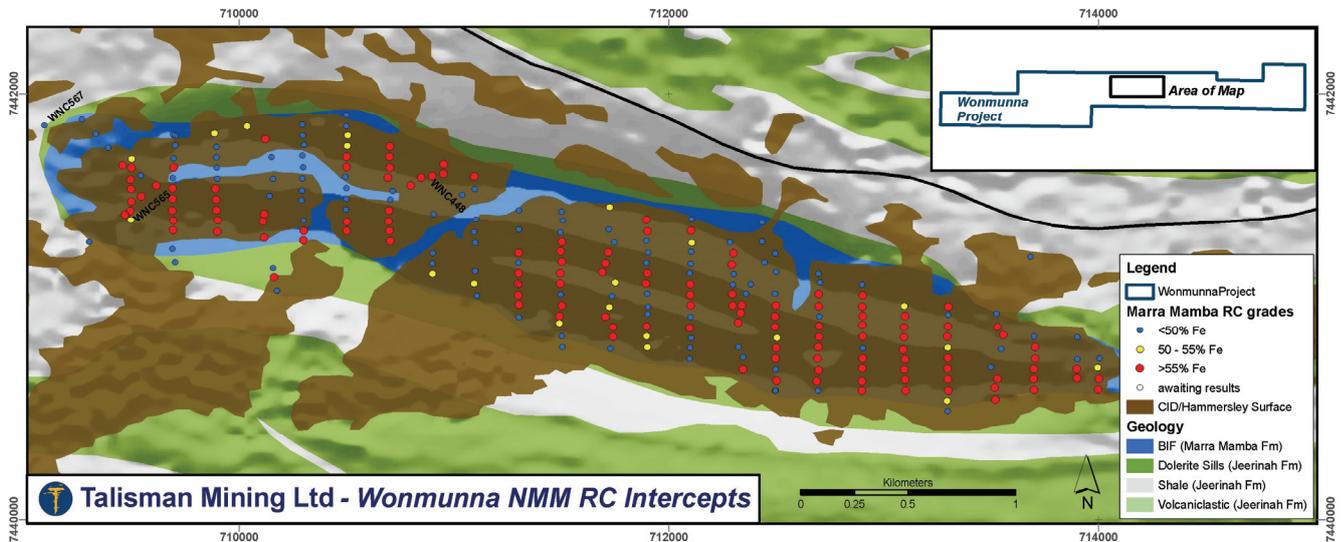

Figure 1

CMM DRILLING

Assay results have been received for a further 5 reverse circulation drillholes completed as part of the program of reconnaissance drilling at the CMM (Central Marra Mamba) prospect, Wonmunnna Project, East Pilbara Region, Western Australia. Significant (>50% Fe) drill intercepts are listed in Table 2 and drillhole locations are shown on Figure 2.

Further drilling, for use in subsequent resource calculations, is in the process of being completed on 200m x 50m centres over the entire prospect. It is currently anticipated that a maiden JORC resource for the CMM prospect will be available before the end of the 2008 calendar year.

Table 2: Significant (>50% Fe) CMM Resource Drill Intercepts WNC447, 452-456

Hole	East	North	From(m)	To(m)	Width(m)	Fe %	SiO ₂ %	Al ₂ O ₃ %	P %	S %	LOI %

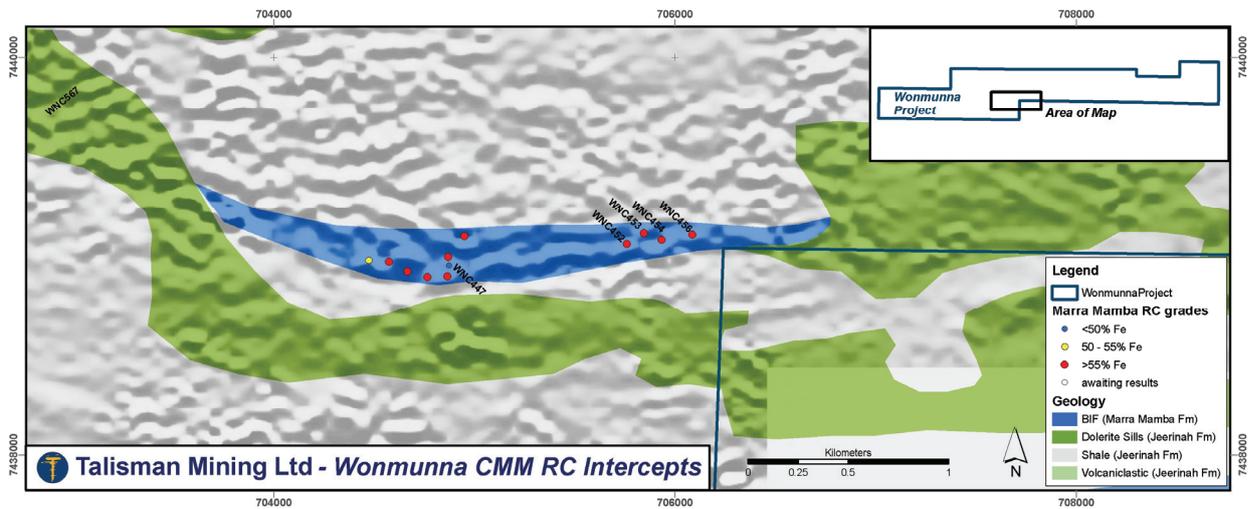

Figure 2

SMM DRILLING

Drill evaluation of the SMM (South Marra Mamba) prospect on 400m x 100m centres, closing to 200m x 50m centres, is ongoing. This drill data will subsequently be utilised for calculation of a maiden JORC resource, anticipated to be available before the close of the 2008 calendar year.

Yours sincerely

S. J. Elliott
Managing Director

Information in this report that relates to Exploration Results and Mineral Resources is based on information compiled by Mr Steven Elliott who is a member of the Australasian Institute of Mining and Metallurgy. Mr Steven Elliott is a full time employee of Talisman Mining Ltd and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity undertaken to qualify as a Competent Person as defined in the 2004 Edition of the "Australian Code for Reporting of Mineral Resources and Ore Reserves". Mr Steven Elliott consents to the inclusion in this report of the matters based on information in the form and context in which it appears.
