## TNG Secures Institutional Investment with \$2.0M Placement

Australian strategic metals company TNG Limited (ASX: TNG) is pleased to announce that it has secured investment from a strategic Hong Kong institutional investor.

The Placement, comprising a total of 15.72 million shares at an issue price of 13 cents per share to raise \$2.04 (before costs), is unconditional and will be issued under TNG's 15% placement capacity under ASX Listing Rule 7.1

The Placement is expected to be settled on 24 April 2015.

The funds raised from the Placement will be used to progress completion of the feasibility study for TNG's flagship 100%-owned Mount Peake Vanadium-Titanium-Iron project in the Northern Territory.

Following settlement of the Placement, TNG's cash reserves will stand at approximately \$5.7 million.

"Securing this institutional investment further strengthens the Company's position in challenging economic conditions said TNG's Managing Director, Mr Paul Burton.

"This reflects the progress we have made as we move closer to development of Mount Peake," he said. "I would expect that the composition of our share register will continue to change as we move closer to a development and attract more institutional and strategic investors

### **About TNG**

TNG is building a world-scale strategic metals business based on its flagship 100%-owned Mount Peake Vanadium-Titanium-Iron Project in the Northern Territory. Located 235km north of Alice Springs, Mount Peake will be a 20-year plus project producing a suite of high-quality, high-purity strategic metals products for global markets including vanadium pentoxide, iron oxide and titanium dioxide. The project, which will be a top-10 global producer, has received Major Project Facilitation status from the NT Government.

**ASX CODE: TNG**

**E** [corporate@tngltd.com.au](mailto:corporate@tngltd.com.au)

The Mount Peake Feasibility Study is well advanced and due for completion by mid-2015, paving the way for project financing and development to proceed. An integral part of TNG's emerging strategic metals business is its 100% ownership of the unique and patented TIVAN® hydrometallurgical process, which offers significantly lower capital and operating costs, lowers risk and successfully extracts two other valuable metals from the resource in addition to vanadium – titanium dioxide and high-purity iron oxide.

Vanadium is a highly strategic metal which is used as an alloy in steel. It is also in strong demand for use in energy storage, with vanadium redox batteries used to store electricity generated by solar and wind power, and lithium-vanadium ion batteries used to power hybrid cars.

#### **Forward-Looking Statements**

This announcement has been prepared by TNG Ltd. This announcement is in summary form and does not purport to be all inclusive or complete.
