## QUARTERLY ACTIVITIES

Strike Resources Limited (**Strike**) presents its Quarterly Report for the quarter ended 31 December 2017.

As at 31 December 2017, Strike had net assets of ~\$5.438 million (comprising ~\$3.042 million gross cash, ~\$1.884 million investments<sup>1</sup> and ~\$0.555 million in other assets (net of provisions/accruals/trade creditors) of ~\$0.043 million).

### Burke Graphite Project, Queensland

During the quarter, Strike reported a maiden JORC Inferred Resource Estimate on its Burke Graphite Project in Queensland, confirming the project as one of highest grade natural graphite deposits in the world<sup>2</sup>.

- **6.3 million tonnes @ 16.0% Total Graphitic Carbon (TGC)** for **1,000,000 tonnes** of contained graphite;
- Within the mineralisation envelope there is included higher grade material of **2.3 million tonnes @ 20.6% TGC** (with a TGC cut-off grade of 18%) for **464,000 tonnes** of contained graphite which will be investigated further.

During the quarter, the Company's Managing Director made a marketing visit to China, where he met with major battery manufacturers and other companies active in the graphite sector.

### Lithium and Gold Exploration, Western Australia

Exploration Licenses EL 45-4799 and E45-4800 were granted to Strike during the previous quarter. They are located in the North-West Pilbara and cover a region considered prospective for Lithium and Gold.

During the quarter, the presence of conglomerate-hosted gold was confirmed in Strike's Paulsens East tenement.

Strike is undertaking a review of available historical data relating to all its Pilbara tenements and planning further exploration, with the primary targeted minerals being gold, lithium, tantalum and rare earth elements.

### About Strike Resources Limited (ASX:SRK)

[Strike Resources](http://www.strikeresources.com.au) is an ASX listed resource company, owner of the high grade [Apurimac Magnetite Iron Ore Project](#) and [CUSCO Magnetite Iron Ore Project](#) in Peru and is currently developing its [Burke Graphite Project](#) in Queensland and [lithium](#) exploration tenements in Western Australia.

<sup>1</sup> Investments comprise liquid investments in a diversified portfolio of various ASX 200 listed resource stocks, undertaken as part of a capital management strategy

<sup>2</sup> Refer Grade Tonnage Data in Table 2 of CSA Global's Burke Graphite Project MRE Technical Summary dated 9 November 2017 (attached as Annexure A of Strike's ASX Announcement dated 13 November 2017: [Maiden Mineral Resource Estimate Confirms Burke Project as One of the World's Highest Grade Natural Graphite Deposits](#))

## PROJECTS

### Burke Graphite Project, Queensland

Strike’s [Burke Graphite Project](#)<sup>3</sup> (in which Strike holds a 60% interest) is located in the Cloncurry region in North Central Queensland, where there is access to well-developed transport infrastructure to an airport at Mt Isa (~122km) and a port in Townsville (~783km).

During the quarter, CSA Global Pty Ltd (**CSA Global**) were engaged by Strike to complete a Mineral Resource Estimate (**MRE**) for the Project, delivering a reported maiden Inferred Mineral Resource of<sup>4</sup>:

- **6.3 million tonnes @ 16.0% Total Graphitic Carbon (TGC)** for **1,000,000 tonnes** of contained graphite;
- Within the mineralisation envelope there is included higher grade material of **2.3 million tonnes @ 20.6% TGC** (with a TGC cut-off grade of 18%) for **464,000 tonnes** of contained graphite which will be investigated further.

These grades place the Burke deposit as one of the highest-grade deposits of graphite in the world held by an Australian listed company.

Based upon the MRE for the Burke Project referred to above, the following Chart illustrates the TGC grades of published Total JORC Resource/Reserves of selected ASX Listed Graphite Projects relative to the Burke Project.

Figure 1 - Selected TGC% of Published Total JORC Resource/Reserve\* vs. Maiden Burke Mineral Resource Estimates

3 Refer Strike’s ASX announcement dated [9 November 2016: Strike Secures Graphite Project in Queensland](#)

4 Refer Strike’s ASX announcement dated [13 November 2017: Maiden Mineral Resource Estimate Confirms Burke Project as One of the World’s Highest Grade Natural Graphite Deposits](#)

In addition to the high-grade nature of the deposit, the Burke Graphite Project:

- Comprises natural graphite that has been demonstrated to be able to be processed by standard flotation technology to international bench mark product categories. The flotation tests conducted by Independent Metallurgical Operations Pty Ltd (**IMO**) have confirmed that a concentrate of purity **in excess of 95% and up to 99% TGC** can be produced using a standard flotation process.
- Contains graphite from which Graphene Nano Platelets (**GNP**) have been successfully extracted direct from the Burke Graphite deposit via Electrochemical Exfoliation (**ECE**). The ECE process is relatively low cost and environmentally friendly compared to other processes, yet it can produce very high purity Graphene products. The ECE process is however not applicable to the vast majority of worldwide graphite deposits as it requires a TGC of over 20% and accordingly the Burke Deposit has potentially significant processing advantages over other graphite deposits.
- Is located in the relatively safe and mining friendly jurisdiction of Queensland, Australia with well-developed transport infrastructure and logistics nearby; and
- Is potentially amenable to low cost open-pit mining.

Given the above highly favourable project characteristics and with the minimum size of the deposit now confirmed, Strike is planning to further investigate the commercial options and requirements for developing a mining operation of between 40,000 – 60,000 tpa of graphite concentrate (which is typical of the production profiles being considered by many other ASX listed graphite developers), to be followed thereafter by a scoping study.

During the quarter, Strike's Managing Director met with a number of major lithium-ion battery manufacturers and graphite companies in China.

The purpose of the visit was to begin developing strategic relationships with potential graphite concentrate offtake partners and other parties who are otherwise active in the Chinese graphite/graphene industry.

Strike notes that China itself is the world's largest producer and consumer of graphite. However, average graphite grades in China are typically much lower than that of the Burke Project and increasing environmental concerns in China are causing companies to look outside of China for stable supplies of high quality graphite concentrate.

The Chinese parties approached expressed keen interest in Strike's graphite deposit and its proposed development activities and discussions with these and other parties will be ongoing with a view to eventually forming binding commercial off-take and development agreements.

In this regard, an experienced Beijing-based Consultant has been retained to facilitate and advance these discussions.

In addition, Strike is currently holding discussions with various Universities and Research Institutions in Australia with regard to partnering with Strike on researching the development of commercial applications for its graphite. Such activities will be focused on areas with the best near-term commercial potential and where, if possible, Australian Government funding support can also be secured.

For further details, please refer to Strike's ASX announcements dated:

- 16 October 2017: [Burke Graphite Project – Metallurgical Testwork Results](#);
- 13 November 2017: [Burke Graphite Project – Maiden JORC Mineral Resource](#); and
- 22 January 2107: [Burke Graphite Project - Update](#).

### Lithium and Gold Exploration Tenements, Western Australia

The North Pilbara hosts a number of lithium and tantalum prospects associated with pegmatites that are related to the Sisters Supersuite of monzogranites and other high end intrusives that intruded the Archean greenstone terrain of the East Pilbara approximately 3 billion years ago.

Lithium and tantalum mineralisation occurs either within the pegmatite veins or within alluvials draining the elevated areas containing the pegmatite veins.

Strike holds two exploration licences, E 45-4799 and EL 45-4800 in the North-West Pilbara totalling ~31,000 hectares<sup>5</sup> that exist within the extent of the known lithium and tantalum mineral fields in the region, adjacent to licences that have outcropping lithium and tantalum elevated pegmatite occurrences. Given the widespread cover of thin wind-blown sands and tertiary laterites/duricrusts, the potential of sub-cropping and shallow buried lithium and tantalum rich pegmatites and alluvial deposits is considered a strong possibility.

Strike’s North-West Pilbara tenements are also favourably located close to the Mt York Lithium-Gold Project and other gold deposits and to adjoining tenements held by Kairos Minerals Limited (ASX:[KAI](#)) and De Grey Mining Limited (ASX:[DEG](#)), in an area of significant activity based upon reported Novo Resources Corp. (TSX-V:[NVO](#))/ Artemis Resources Limited (ASX:[ARV](#)) discoveries in the Pilbara (refer Figure 2).

Figure 2 – Strike’s North-West Pilbara Tenements (EL 45/4799 and EL 45/4800)

5 Refer Strike’s ASX Announcement dated 18 August 2016: [New Lithium Projects in Chile and Western Australia](#)

Strike also holds the Paulsens East tenement, which is located ~7km east of the Paulsens Gold Mine operated by Northern Star Resources Ltd (ASX:[NST](#)) (which has mined over 700k ounces at an average grade of 7.63 g/t Au<sup>6</sup>) has been held by Strike for many years for its deposit of high grade hematite. Strike has historically conducted extensive drilling on the tenement for iron ore.

A recent review by Strike of the historical data within the tenement for other mineralisation has now indicated the presence of a historical gold occurrence, hosted within conglomerate rocks on a faulted contact between the Fortescue Group and Ashburton Basin sediments.

Strike notes the potential of the Paulsens area, given the geological setting with mineralised conglomerates is similar to the Novo/Artemis gold discoveries, with these discoveries having opened up fresh geological models for gold prospectivity compared with traditional paradigms.

Strike also notes that the Paulsens East tenement directly abuts the southern boundary of Chalice Gold Mines Limited's (ASX:[CHN](#)) West Pilbara Project tenements, with newly pegged Novo Resources' tenements nearby to the south-east (refer Figure 3).

Figure 3 – Strike's Paulsens East Tenement (Retention Licence RL 47/7)

Strike is currently evaluating all of its Pilbara tenements and planning further exploration activities to determine their prospectivity for lithium, tantalum, rare earths and gold.

6 Source: Northern Star Resources Ltd company website: <http://www.nsr ltd.com/>

For further details, please refer to Strike's ASX announcement dated 20 November 2017: [Gold Potential of Strike's Pilbara Tenements](#).

### Apurimac Iron Ore Project, Peru

Between 2006 and 2014, Strike's primary focus was on the development of its Apurimac Magnetite Project in Peru, recognised as one of the highest grade, large scale magnetite projects in the world with the potential to support the establishment of a significant iron ore operation.

Adverse market conditions however have led Strike to suspend all development activities on this and its other iron ore projects in Peru.<sup>7</sup> Nevertheless, the nature of the Apurimac deposit and the development work undertaken to-date define this project as a potentially strategic asset in Peru which may, when market conditions improve, provide opportunity for Strike to recover value.

The exceptionally high grade 57% Fe is almost twice as high as magnetite deposits developed in Australia; ore bodies are coarse grained and relatively soft, resulting in potentially cheaper processing costs once in production.

A Prefeasibility Study completed in 2008<sup>8</sup> and updated in 2010<sup>9</sup> on the Apurimac Project indicated clear potential for development of a world class iron ore project:

- JORC Indicated and Inferred Mineral Resource at the main Opaban I/III concessions of 269Mt of iron ore at 57.3% Fe (142 Mt Indicated Resource at 57.84% Fe and 127 Mt Inferred Resource at 56.7% Fe). Of this, potentially 67Mt of Direct Shipping Ore (DSO) at an average grade of 61.5% Fe has been identified.
- Mineralisation predominantly high-grade, coarse-grained magnetite providing comparatively high mass recoveries (>60%) at coarse grind size (>500 microns).
- Excellent exploration potential within current concessions with several targets containing ironstones grading >60% Fe in similar geological settings to the main Opaban concessions.
- Base case of 20Mtpa of concentrate produced by open pit mining and processing 20 – 27Mtpa of ore with transport of the high grade (>66% Fe) product to the coast via a slurry pipeline for drying and shipment to customers.
- Attractive life-of-mine operating expenses (2010) of US\$17 – 20 per tonne of product.
- Estimated capital expenditure (2010) of US\$2.6 – 2.9 billion, competitive with other major iron ore projects at the time.

### Cusco Iron Ore Project, Peru

The Cusco Project lies approximately 150km to the south - east of Apurimac and forms a potential secondary development target for Strike in Peru with an initial Inferred Resource estimate of 104Mt at 32.6% Fe.

Like Apurimac, iron ore mineralisation at the project is coarse grained and dominated by magnetite, with high grades recorded. Preliminary metallurgical tests indicate a concentrate grade of >65% Fe could be produced from this ore using conventional grinding and magnetic separation processes.

<sup>7</sup> Refer Strike's ASX Announcements dated 28 February 2014: [Legal Injunction and Suspension of Operations in Peru](#), 13 March 2014 [Lifting of Injunction and Strategic Review](#) and 14 April 2014: [Exit from Peru](#)

<sup>8</sup> Refer Strike's ASX Announcement dated 23 July 2008: [Prefeasibility Results Confirm World Class Prospects in Peru](#)

<sup>9</sup> Refer Strike's ASX Announcement dated 23 November 2010: [Apurimac Project Update](#) and Strike's [December 2010 Quarterly Report](#)

### **Lithium Exploration Concessions, Chile**

In 2016 Strike lodged applications to secure a number of lithium exploration concessions in Northern Chile.<sup>10</sup> The area reported to contain 'caliche' style mineralisation which is formed predominantly from hardened deposits of sedimentary alkali metal salts (halides, nitrates and sulfates).

Initial soil sampling reported by the previous holders of the concessions had confirmed the presence of lithium mineralisation within the tenements, with assay results returning elevated grades of lithium.

Due to delays and additional unforeseen costs relating to the granting of the concessions, the unusual style of mineralisation and the lack of regulatory clarity in Chile regarding lithium mining, Strike decided during the quarter not to proceed any further with its application for these concessions.

Strike has no current plans for further exploration activity in Chile.

---

## JORC MINERAL RESOURCES

The following JORC Code compliant ([2004](#) and [2012](#)) Mineral Resources estimates are as at the end of the quarter and currently:

### Apurimac Iron Ore Project (Peru)

(Strike – 100%)

The Apurimac Project has a JORC Code (2012 Edition) compliant Mineral Resource of 269.4 Mt, consisting of:

- a 142.2 Mt Indicated Mineral Resource at 57.8% Fe; and
- a 127.2 Mt Inferred Mineral Resource at 56.7% Fe.

Category	Concession	Density t/m <sup>3</sup>	Mt	Fe%	SiO <sub>2</sub> %	Al <sub>2</sub> O <sub>3</sub> %	P%	S%
Indicated	Opaban 1	4	133.71	57.57	9.46	2.54	0.04	0.12
Indicated	Opaban 3	4	8.53	62.08	4.58	1.37	0.07	0.25
Inferred	Opaban 1	4	127.19	56.7	9.66	2.7	0.04	0.2
<b>Total Indicated and Inferred</b>			<b>269.4</b>	<b>57.3</b>	<b>9.4</b>	<b>2.56</b>	<b>0.04</b>	<b>0.16</b>

The information in this JORC Resource table was prepared and first disclosed under the [2004 JORC Code](#) (in Strike's ASX announcement dated [11 February 2010: Peruvian Apurimac Iron Ore Project Resource Increased to 269 Million Tonnes](#)) and has subsequently been upgraded to comply with the [2012 JORC Code](#) and disclosed in Strike's ASX Announcement dated [19 January 2015: Apurimac Mineral Resources Updated to JORC 2012 Standard](#).

### Cusco Iron Ore Project (Peru)

(Strike – 100%)

The Cusco Project has a JORC Code (2004 Edition) compliant Mineral Resource of 104.4 Mt Inferred Mineral Resource at 32.62% Fe.

Category	Concession	Density t/m <sup>3</sup>	Mt	Fe%	SiO <sub>2</sub> %	Al <sub>2</sub> O <sub>3</sub> %	P%	S%
Inferred	Santo Tomas	4	104.4	32.62	0.53	3.19	0.035	0.53

The information in this JORC Resource table was prepared and first disclosed under the [2004 JORC Code](#) (in Strike's ASX announcement dated [17 June 2011: Cusco Project – Resource Estimate](#)). It has not been updated since to comply with the 2012 JORC Code on the basis that the information has not materially changed since it was last reported.

### Burke Graphite Project (Queensland, Australia)

(Strike – 60%)

The Burke Graphite Project has a JORC Code (2012 Edition) compliant Mineral Resources Estimate (MRE).

Category	Weathering State	Mt	TGC (%)	Contained Graphite (Mt)	Density (t/m)
Inferred	Oxide	0.5	14.0	0.1	2.5
	Fresh	5.8	16.2	0.9	2.4
<b>Inferred</b>	<b>Total Oxide + Fresh</b>	<b>6.3</b>	<b>16.0</b>	<b>1.0</b>	<b>2.4</b>

Note: The Mineral Resource was estimated within constraining wireframe solids defined above a nominal 5% TGC cut-off. The Mineral Resource is reported from all blocks within these wireframe solids. Differences may occur due to rounding.

Refer also Grade Tonnage Data in Table 2 of CSA Global Pty Ltd's Burke Graphite Project MRE Technical Summary dated 9 November 2017 (attached as Annexure A of Strike's ASX Announcement dated 13 November 2017: [Maiden Mineral Resource Estimate Confirms Burke Project as One of the World's Highest Grade Natural Graphite Deposits](#)).

## LIST OF MINERAL CONCESSIONS

The following mineral concessions were held as at the end of the quarter and currently:

### Apurimac Iron Ore Project (Peru)

(Strike – 100%)

Concession Name	Area (Ha)	Province	Code	Title	File No
(1) Opaban I	999	Andahuaylas	5006349X01	No 8625-94/RPM Dec 16, 1994	20001465
(2) Opaban III	990	Andahuaylas	5006351X01	No 8623-94/RPM Dec 16, 1994	20001464
(3) Ferrum 1	965	Andahuaylas	010298304	No 00228-2005-INACC/J Jan 19, 2005	11053798

### Paulsens East Iron-Ore Project (Western Australia)

(Strike – 100%)

Tenement No.	Status	Grant Date	Expiry Date	Area (blocks/Ha)	Area (km <sup>2</sup> )
Retention Licence RL 47/7	Granted	4/12/14	4/12/2019	~381 Ha	~3.81

### Burke Graphite Project (Queensland)

(Strike – 60%)

Tenement No.	Status	Grant Date	Expiry Date	Area (blocks/Ha)	Area (km <sup>2</sup> )
EPM 25443	Granted	4/9/14	3/9/2019	5 sub-blocks	~16
EPM 25696	Granted	2/4/15	1/4/2020	11 sub-blocks	~36

### Lithium Project (Western Australia)

(Strike – 100%)

Tenement No.	Status	Grant Date	Expiry Date	Area (blocks/Ha)	Area (km <sup>2</sup> )
EL 45-4799	Granted	4/7/17	4/7/2022	26 blocks (8292ha)	~83
EL 45-4800	Granted	10/8/17	10/8/2022	70 blocks (22422ha)	~224

## JORC CODE COMPETENT PERSON'S STATEMENTS

### JORC Code (2012) Competent Person Statement - Apurimac Project Mineral Resources

The information in this document that relates to Mineral Resources and other Exploration Results (as applicable) in relation to the Apurimac Iron Ore Project (Peru) is based on, and fairly represents, information and supporting documentation prepared by Mr Ken Hellsten, B.Sc. (Geology), who is a Fellow of [The Australasian Institute of Mining and Metallurgy](#) (AusIMM). Mr Hellsten was a principal consultant to Strike Resources Limited and was also formerly the Managing Director of Strike Resources Limited (between 24 March 2010 and 19 January 2013). Mr Hellsten has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the [2012 Edition](#) of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves" (JORC Code). Mr Hellsten has approved and consented to the inclusion in this document of the matters based on his information in the form and context in which it appears.

### JORC Code (2004) Competent Person Statement – Cusco Project Mineral Resources

The information in this document that relates to Mineral Resources and other Exploration Results (as applicable) in relation to the Cusco Iron Ore Project (Peru) is based on, and fairly represents, information and supporting documentation prepared by Mr Ken Hellsten, B.Sc. (Geology), who is a Fellow of [The Australasian Institute of Mining and Metallurgy](#) (AusIMM). Mr Hellsten was a principal consultant to Strike Resources Limited and was also formerly the Managing Director of Strike Resources Limited (between 24 March 2010 and 19 January 2013). Mr Hellsten has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the [2004 Edition](#) of the JORC Code. Mr Hellsten approves and consents to the inclusion in this document of the matters based on this information in the form and context in which it appears.

### JORC Code (2012) Competent Person Statement - Burke Graphite Project Mineral Resources

The information in this document that relates to Mineral Resources in relation to the Burke Graphite Project is extracted from the following ASX market announcement made by the Strike Resources Limited on:

- [13 November 2017: Maiden Mineral Resource Estimate Confirms Burke Project as One of the World's Highest Grade Natural Graphite Deposits](#)

The information in the original announcement (including the CSA Global MRE Technical Summary in Annexure A) that relates to in situ Mineral Resources for the Burke Graphite Project is based on information compiled by Mr Grant Louw under the direction and supervision of Dr Andrew Scogings, who are both full-time employees of CSA Global Pty Ltd. Dr Scogings takes overall responsibility for this information. Dr Scogings is a Member of the Australian Institute of Geoscientists (AIG) and the Australasian Institute of Mining and Metallurgy (AusIMM) and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves" (JORC Code). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

The information in this document that relates to metallurgical test work in relation to the Burke Graphite Project is extracted from the following ASX market announcements made by the Strike Resources Limited on:

- [16 October 2017: Test-work confirms the potential suitability of Burke graphite for Lithium-ion battery usage and Graphene production](#)
- [13 November 2017: Maiden Mineral Resource Estimate Confirms Burke Project as One of the World's Highest Grade Natural Graphite Deposits](#)

The information in the original announcements that relates to these metallurgical test work is based on, and fairly represents, information and supporting documentation prepared by Mr Peter Adamini, BSc (Mineral Science and Chemistry), who is a Member of The Australasian Institute of Mining and Metallurgy (AusIMM). Mr Adamini is a full-time employee of Independent Metallurgical Operations Pty Ltd, who has been engaged by Strike Resources Limited to provide metallurgical consulting services. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

The information in this document that relates to Exploration Results in relation to the Burke Graphite Project is extracted from the following ASX market announcements made by the Strike Resources Limited on:

- [21 April 2017: Jumbo Flake Graphite Confirmed at Burke Graphite Project, Queensland](#)
- [13 June 2017: Extended Intersections of High Grade Graphite Encountered at Burke Graphite Project](#)
- [21 June 2017: Further High Grade Intersection Encountered at Burke Graphite Project](#)
- [16 October 2017: Test-work confirms the potential suitability of Burke graphite for Lithium-ion battery usage and Graphene production](#)
- [13 November 2017: Maiden Mineral Resource Estimate Confirms Burke Project as One of the World's Highest Grade Natural Graphite Deposits](#)

The information in the original announcements that relates to these Exploration Results is based on, and fairly represents, information and supporting documentation prepared by Mr Peter Smith, BSc (Geophysics) (Sydney) AIG ASEG, who is a Member of The Australasian Institute of Geoscientists (AIG). Mr Smith is a consultant to Strike Resources Limited. Mr Smith has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the [2012 Edition](#) of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves" (JORC Code). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements.

The Strike ASX market announcements referred to above may be viewed and downloaded from the Company's website: [www.strikeresources.com.au](http://www.strikeresources.com.au) or the ASX website: [www.asx.com.au](http://www.asx.com.au) under ASX code "SRK".

## FORWARD LOOKING STATEMENTS

This report contains "forward-looking statements" and "forward-looking information", including statements and forecasts which include without limitation, expectations regarding future performance, costs, production levels or rates, mineral reserves and resources, the financial position of Strike, industry growth and other trend projections. Often, but not always, forward-looking information can be identified by the use of words such as "plans", "expects", "is expected", "is expecting", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes", or variations (including negative variations) of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might", or "will" be taken, occur or be achieved. Such information is based on assumptions and judgements of management regarding future events and results. The purpose of forward-looking information is to provide the audience with information about management's expectations and plans. Readers are cautioned that forward-looking information involves known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of Strike and/or its subsidiaries to be materially different from any future results, performance or achievements expressed or implied by the forward-looking information. Such factors include, among others, changes in market conditions, future prices of minerals/commodities, the actual results of current production, development and/or exploration activities, changes in project parameters as plans continue to be refined, variations in grade or recovery rates, plant and/or equipment failure and the possibility of cost overruns.

Forward-looking information and statements are based on the reasonable assumptions, estimates, analysis and opinions of management made in light of its experience and its perception of trends, current conditions and expected developments, as well as other factors that management believes to be relevant and reasonable in the circumstances at the date such statements are made, but which may prove to be incorrect. Strike believes that the assumptions and expectations reflected in such forward-looking statements and information are reasonable. Readers are cautioned that the foregoing list is not exhaustive of all factors and assumptions which may have been used. Strike does not undertake to update any forward-looking information or statements, except in accordance with applicable securities laws.

### Notes

1. The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity that wishes to disclose additional information is encouraged to do so, in a note or notes included in or attached to this report.
2. If this quarterly report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, AASB 6: Exploration for and Evaluation of Mineral Resources and AASB 107: Statement of Cash Flows apply to this report. If this quarterly report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
